# Network & Security Consulting Ltd

# About Us

Established in 2010, NSC covers Network & Security implementations, Security Auditing, Software Development & Training. NSC continued a sustainable growth along the years, though, without any advertising - we let our good deeds do it for us.

We are concerned with the connectivity and security of our clients' businesses, as much as they are. We cater their networks as if they were our own.

# Company History

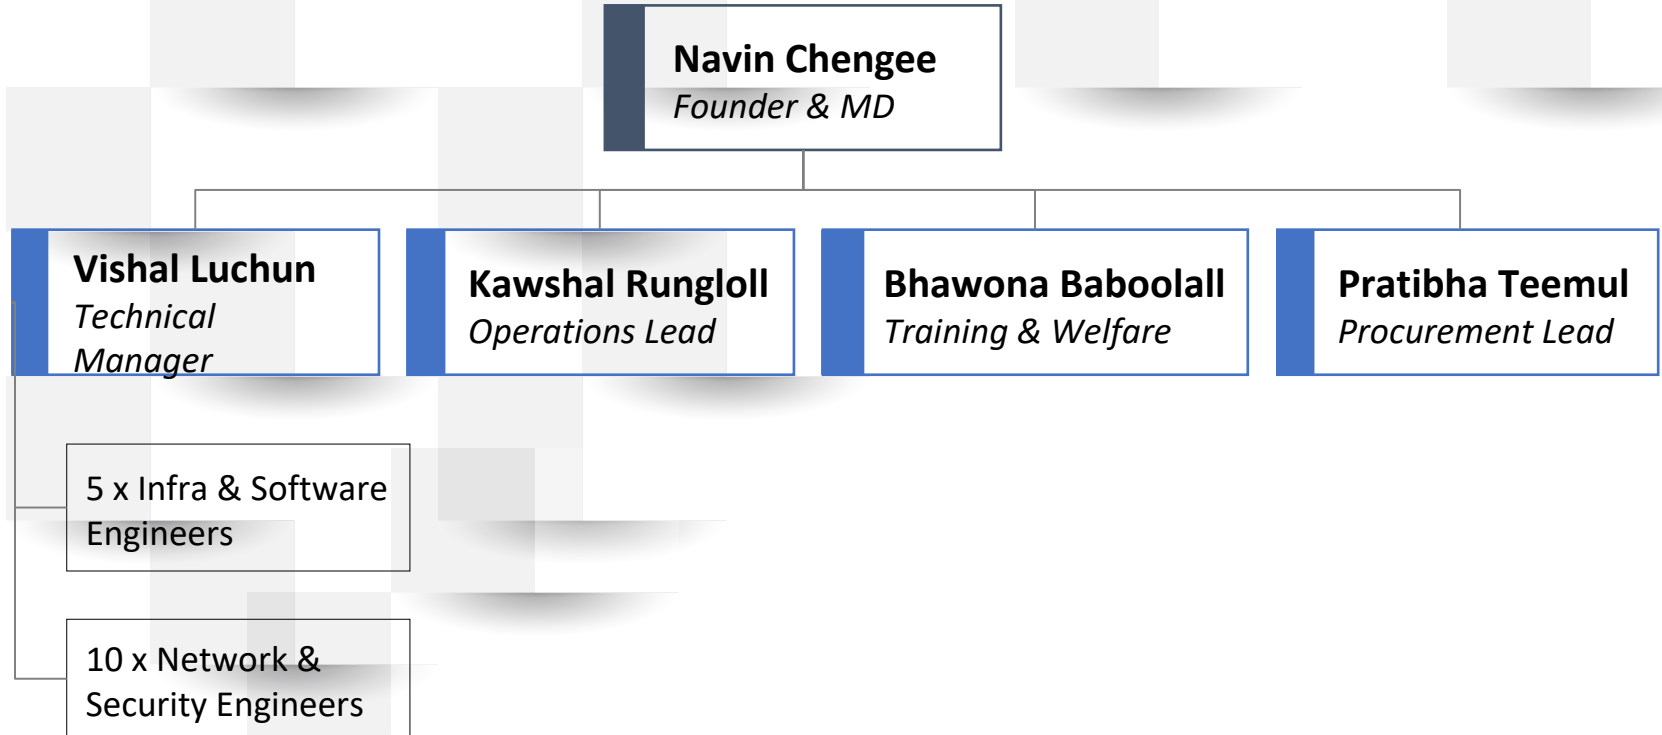

**illumini!**  
FUTURE ENLIGHTENED

# **Our Solutions**

- **Penetration Testing & Security Audit**
- **Managed Services – Rent an IT Expert**
- **NOC as a Service (NOCaaS)**
- **PCI DSS Audit & Certification**
- **Software Development**
- **Implementation of Network & Security Solutions**
- **Cabling, WiFi & CCTV**
- **Implementation of Server Infrastructure**
- **Relocation of IT and other Company Assets**
- **Rental of IT Equipment**

# Meet the Team

# Our Certifications

## Fortinet

## Cisco

**EC-Council**

**Certified Information Systems Auditor (CISA)**

# Our Partners

# They Trust Us

## Mission

To make IT easy through technology so that our clients can concentrate on their core businesses by staying connected resiliently, to their suppliers and clients, securely. We are not seeking to be the biggest, but to be the best. We strive for excellence and aim to exceed expectations. We work hard to achieve our goals and we encourage our staff to be ambitious.

## Vision

To be recognised as a key provider in the provision of turnkey IT solutions. To become a recognised specialist in our sectors of expertise along with a sustainable growth.

Retaining our competitive edge through innovation is central to the way we operate and we are always looking to improve our business processes and services

## Values

As our business continues to grow we work hard to keep these values at the core of our operation. We are a company that values individual excellence and strong teamwork, where people care about each other and share their knowledge freely.

We constantly reward and celebrate individual and team success.

# **Our Solutions**

- **Penetration Testing & Security Audit**
- **Managed Services – Rent an IT Expert**
- **NOC as a Service (NOCaaS)**
- **PCI DSS Audit & Certification**
- **Software Development**
- **Implementation of Network & Security Solutions**
- **Cabling, WiFi & CCTV**
- **Implementation of Server Infrastructure**
- **Relocation of IT and other Company Assets**

# Penetration Testing & Security Audit

Penetration testing, also called pen testing, is a cyberattack simulation launched on your computer system. The simulation helps discover points of exploitation and test IT breach security. Unlike vulnerability assessment, ethical hacking at NSC not just seeks for vulnerabilities. We aim to find out security breaches in your network before true enemies attempt to exploit sensitive data. To stay ahead of adversaries, we apply hacker's mindset and techniques.

# Managed Services – Rent an IT Expert

Engaging suitably IT skilled and screened temporary workers simply makes good sense for businesses for a variety of situations. NSC can supply quality IT staffs for a time-frame exactly suited to your workplace.

Temporary employees may have various skills & perspectives about specific tasks/projects within their role, that can help improve efficiency within your business. If a new project or product requires skills outside of your team's area of expertise, a IT Expert can provide that new talent to assist with those skills, train other staff members on these efficient & effective steps & only stay for as long as they are needed or on a specific time schedule, not on a full-time basis.

# NOC as a Service (NOCaaS)

NOC as a service delivered by NSC monitors infrastructure health, security and capacity and ensure maximum network performance. Our NOC as a service provides comprehensive monitoring and remediation services for servers, networks, applications, databases and workstations.

NSC offers tailor made Network Operations Center (NOC) services. We design, build, manage and monitor IP network infrastructures of companies which need the highest possible speed and uptime.

At NSC, we provide NOC as a service for various types of networks, servers, databases along with improving performance while reducing the capital expenditure.

# PCI DSS Audit & Certification

The Payment Card Industry Data Security Standard (PCI DSS) is a set of security standards designed to ensure that ALL companies that accept, process, store or transmit credit card information maintain a secure environment.

# Software Development

NSC Software developers own the process of transforming data into an organized structure for a product such as a mobile app or website. As you tackle complex development projects to grow your business, you'll need the right partner for your needs.

NSC comes in to work with your team to understand your procedural needs and develop a tailor-made application that be suits your company.

# Implementation of Network & Security Solutions

Firewalls were previously considered as an optional equipment for many companies but today with the increasing number of Cyber attacks, Firewalls are now a must for all companies. We provide our customers with Next Generation Firewall (NGFW) which provides a better network visibility and control compared to traditional firewalls which were limited to filtering based on IP addresses, Protocols and port numbers

We provide IP PBX solutions mainly to Call Centers for inbound and outbound call campaigns. NSC VoIP network solutions for Contact Centers are designed to help enterprises & service providers in their transition towards an all-IP voice infrastructure by providing all the network elements required to enable and support the smooth operation of the contact center application suite while removing the risks of migrating into an IP environment.

# Cabling, WiFi & CCTV

We provide end-to-end implementation and maintenance of your network connectivity needs through wireless or cabling for the following categories: Cat 6, Cat 6a and Fiber Optics. Also, we provide patch cords, data cabinets, patch panels and trunking.

Security is the key concern, to complement your Physical personnel(Security guards), CCTV security system is a vital element when it comes to the security of your business. It allows you to have a live view of your business premises allowing you to monitor people entering the business premises, employees and other assets. The cameras can be accessed by authorised people within the company as well as outside the company.

# Implementation of Server Infrastructure

We provide end-to-end implementation and maintenance of your network connectivity needs through wireless or cabling for the following categories: Cat 6, Cat 6a and Fiber Optics. Also, we provide patch cords, data cabinets, patch panels and trunking.

Security is the key concern, to complement your Physical personnel(Security guards), CCTV security system is a vital element when it comes to the security of your business. It allows you to have a live view of your business premises allowing you to monitor people entering the business premises, employees and other assets. The cameras can be accessed by authorised people within the company as well as outside the company.
